

CUSTOMER SUCCESS STORY

Lubbock County Courthouse

Challenge

Lubbock County Courthouse needed to create an environment where every voice could be heard clearly. Moyers Group needed a solution that would support both in-person and remote participants while maintaining speech intelligibility and minimizing ambient noise. The courthouse required an audio system that would be discreet and effective for various courtroom needs, from prosecution and defense presentations, to juror engagement. Balancing the installation process with ongoing court activities added a logistical challenge, requiring carefully scheduled access to avoid disrupting courtroom operations.

Solution

Moyers Group chose Sennheiser's TeamConnect Ceiling 2 (TCC 2) microphones to meet the complex needs of Lubbock County's courtrooms. The TCC 2 provided outstanding speech clarity, reducing unnecessary background noise pickup and creating an environment where every voice is heard with precision. Moyers Group leveraged features like exclusion zones, priority zones, and camera control with talker position data to enhance courtroom functionality. Control Cockpit software also added remote management capabilities, enabling the courthouse IT department to monitor and control settings with ease.
