

CUSTOMER SUCCESS STORY

JR Automation

Challenge

With multiple locations and complex conference room environments, JR Automation required an audio solution that could adapt to different acoustic challenges while maintaining high-quality performance. Their existing setups lacked the ability to fine-tune microphone settings in real time, making it difficult to combat ambient noise and other environmental factors. They needed a reliable, high-performance microphone solution that could deliver consistent audio clarity while offering seamless integration into their conference room standards.

Solution

After evaluating multiple options, JR Automation selected Sennheiser's TeamConnect Ceiling Solutions (TCC) and TeamConnect Bar Medium (TC Bar Medium) for their exceptional audio quality, reliability, and flexibility. The TCC's advanced beamforming technology ensures crystal-clear audio pickup, while the TC Bar Medium delivers a seamless hybrid collaboration experience. A key advantage was the ability to adjust microphone settings and hear changes in real time, eliminating the need for system reboots. With Sennheiser's solutions, JR Automation has successfully standardized its conference room audio across various locations, ensuring a consistent and professional communication experience for both in-person and remote meetings.
